

Femexin

COMPOSITION

Each tablet contains:
Levonorgestrel 0.10 mg. + Ethinyl Estradiol 0.02 mg.

DRUG ACTION

Oral contraceptive.
Regulates the menstrual cycles.
Levonorgestrel is one of the most used progestins in the world.
The experience with this steroidal drug amounts to about 30 years, which equates to millions of women who have used and continue to use this drug for their oral contraceptive treatments. Moreover, it has full validity in USA and some European countries.

DOSAGE

In order to achieve the highest contraceptive efficacy, FEMEXIN must be taken according to the following instructions, at intervals not exceeding 24 hours.
Start the treatment on the first day of menstrual bleeding, taking the first tablet of the package orally. From there on, take one tablet at about the same time each day for 21 consecutive days. After a 7-day rest period, on the 8th day start the new package.

PRESENTATION

Each package contains 21 tablets.
