

Secufem

COMPOSITION

Each tablet contains:
Levonorgestrel 0.75 mg.

DRUG ACTION

Emergency oral contraceptive. Use after intercourse.

DOSAGE

Take first tablet as soon as possible after unprotected intercourse, within 72 hours.

Take the second tablet 12 hours later.

This drug can be taken at any time of the sexual cycle. After using this emergency method, a barrier birth control method is recommended until the next menstruation. From there on, decide whether to use any of the traditional methods of birth control.

If SECUFEM was used during a treatment with oral contraceptives, the latter must be carried on as usual until completion.

PRESENTATION

Each package has 2 tablets containing 0.75 mg of Levonorgestrel.
