

Diva Continuo

COMPOSITION

Each tablet contains:

Drospirenone 3.00 mg, ethinylestradiol 0.02 mg, and excipients (q.s.)

DRUG ACTION

Preventing pregnancy.

Taking one daily tablet of Diva continuo inhibits ovulation, alters the cervical mucus, induces changes in the endometrium, and alters tubal motility, thus preventing pregnancy.

DOSAGE

Take the first pill of the pack orally on day 1 of the menstrual cycle - the day when menstrual bleeding starts. Then, take 1 pill per day, always at the same time, for 28 consecutive days.

PRESENTATION

Packs containing 1 and 3 blisters with 28 white tablets.
